SUMMARY

Senior Full-Stack Software Engineer with 10+ years building scalable web and mobile systems across React, React Native, and backend services. Led engineering teams and shipped production systems used by 100K–300K+ users in fintech, healthcare, and education. Specializes in building end-to-end platforms, distributed systems, and mobile-first products.

LANGUAGES AND TECHNOLOGIES

- **Languages:** Ruby, JavaScript (JS), TypeScript (TS), Python, Go, Rust
- **Frontend:** React, Next.js, Vue, Nuxt.js
- **Backend:** Node.js, Express, Django, Flask
- **Mobile:** React Native (RN), Flutter
- **Databases:** PostgreSQL, MongoDB, Firebase, Supabase
- **Cloud & DevOps:** AWS, GCP, Docker, CI/CD, GitHub Actions, Kubernetes

PROFESSIONAL EXPERIENCE

healthcompiler.com | Solutions Architect December 2025 - Current

- Built and deployed a scalable AI agent platform using Kubernetes and Docker, enabling rapid iteration and deployment of multi-agent systems.
- Architecting and building production systems including AI-driven platforms and scalable web applications using React, Next.js, and GCP.
- Implemented SSR, Nginx routing, and 301 redirects to improve indexing and reduce page load times.
- Re-architected data ingestion pipeline with Python processing +3,000,000 EHR/Billing/Communication records consistently from upstream vendors while deduplicating records & validating data.

1long.vn/stockvibes.ai | CTO/Engineering Manager Jan 2024 - November 2025

- Built and shipped the first production version of the platform end-to-end, including mobile app, backend services, CI/CD pipeline, admin dashboard, and App Store /Google Play release process. After the MVP launch, led a team of 6 engineers to expand the product, improve reliability, and scale user-facing systems in production.
- Designed and implemented an end-to-end mobile release automation system using Docker, GitHub Actions, and GCP Cloud Run, handling build versioning, signing, automated builds, distribution to internal testers, and App Store / Google Play releases, reducing deployment time to minutes.
- Architected multi-agent LLM workflows using LangChain and FastAPI, supporting production inference, tool-calling orchestration, and API-driven execution pipelines.
- Built LLM-powered analysis workflows using LangChain, Redis, and FastAPI to process and interpret financial indicators, reducing analysis time by 80% through automated reasoning and retrieval pipelines.
- Architectured and built StockVibes.AI, a full-stack platform, including backend services (FastAPI, PostgreSQL, SQLAlchemy) and a React/Next.js analytics dashboard with real-time data visualization (Recharts). Designed GCP-based CI/CD infrastructure (Cloud Build, Cloud Run, Cloud Triggers) enabling automated and reliable production deployments.

DataAnnotation | Part-time / Contract | Remote Nov 2022 - Current

- Evaluated and refined LLM outputs across software engineering and data science tasks, improving response quality through structured feedback and iterative model evaluation.
- Labeled, validated, and corrected training data used for model fine-tuning, improving consistency and accuracy across multiple model iterations.

BlueTread | Software Engineer | Remote Nov 2023 - Jan 2024

US citizen legally allowed to work in USA without sponsorship

- Shipped production features for Adapt Health's React Native mobile application (MyApp), serving 300K+ MAUs across iOS and Android. Worked across cross-platform and native stacks (React Native, Expo, TypeScript, Java, Objective-C) to deliver and maintain production features, improve stability, and support release cycles.
- Engineered a full mobile release automation system using GitHub Actions, Linux scripting, and Firebase App Distribution, handling build orchestration, code signing, and staged distribution of Android and iOS releases (APK/IPA), enabling consistent and repeatable deployment workflows.
- Designed and implemented automated mobile testing pipelines using Appium, Jest, Mocha, and React Native Testing Library (RNTL), integrating integration tests into CI workflows to improve release stability and reduce regression risk.
- Designed and implemented analytics and crash monitoring systems for a 300K+ MAU mobile application using Google Analytics, Crashlytics, and Sentry, tracking user behavior and crash rates to prioritize engineering effort based on defined severity thresholds.
- Developed client-side OCR and text recognition features using native iOS and Android machine learning toolkits, enabling automated extraction of structured data from images and significantly reducing manual processing time across healthcare and insurance workflows.

ScanlabMR | Software Engineer | Remote Jan 2021 - Nov 2022

- Engineered a 3D MRI visualization and reconstruction system using JS, Three.js, and AMI, enabling interactive phase voxel-based imaging for educational use at scale.
- Built automated exam reporting and analytics system using Python, Node.js, SQL, and Vue, generating performance insights and identifying knowledge gaps for 2,000+ radiologists.
- Developed a role-based access and subscription system (registration codes, trial management, access control), improving free-trial enforcement and reducing manual administration effort by 50%.
- Created a high-volume assessment platform (Hackerrank-style) evaluating 500+ radiology candidates monthly, including question delivery, scoring, and results tracking.
- Built internal admin dashboard for managing thousands of exam questions and assessments, reducing operational overhead and eliminating developer dependency for routine updates.
- Collaborated with product and engineering teams by writing bi-weekly technical design documents to align feature requirements and system implementation.

1on1 English | Software Engineer / Solution Architect | Ho Chi Minh City, Vietnam Nov 2019 - Dec 2020

- Integrated Zoom SDK into mobile applications using Objective-C and Java, enabling real-time video communication and reducing MVP development timeline from ~12 months to under 3 months (75%+ acceleration).
- Led development of the first production release of a cross-platform mobile learning application used by 300+ concurrent students and teachers, managing a team of 5 engineers and building features using React Native and Node.js for Android, iOS, and tablets.
- Designed and implemented automated Google Forms prefill and data collection workflows using JavaScript, improving teacher data entry efficiency by 25% while reducing errors and improving downstream reporting accuracy.

CoderSchool | Software Engineer / Instructor | Ho Chi Minh City, Vietnam Feb 2017 - Nov 2019

- Built and delivered a structured full-stack development curriculum for 100+ students, covering React, Node.js, Ruby on Rails, and Python/Flask, including lectures, assessments, and project-based learning modules.
- Improved student satisfaction (NPS +~20%) by redesigning curriculum structure, implementing structured feedback loops, and enhancing project-based learning experiences.

Canva | Software Engineer | Sydney, Australia Jan 2016 - Feb 2017

- Built responsive UI components in React + TypeScript, improving consistency and usability across key product surfaces.
- Developed cross-browser compatible interfaces using HTML5, CSS3, and JavaScript, ensuring reliable experience across major platforms.
- Optimized frontend asset pipeline by configuring Webpack bundling, reducing build size and improving load performance.
- Collaborated with the engineering team using Git workflows, improving code review efficiency and development coordination.

Education

Florida State University **Tallahassee, FL**

B.S. Computer Science in Computer Science, GPA: 3.6

PROJECT WORK

OpenExchange | **Full Stack Developer** 2025

https://github.com/primetimetran/open-exchange

- Built a financial trading platform using microservices architecture for matching engine and ledger systems.
- Implemented services using Next.js, Go, and Rust with Docker-based deployment. Designed for scalability, reliability, and high-throughput transaction processing.

AI Agent Platform | **Full Stack Developer** 2025

https://github.com/primetimetran/k8s-agent-marketplace-platform

- Built a Kubernetes-based platform for deploying AI agents with configurable environments and automated infrastructure setup.
- Enabled developers to deploy agents from GitHub repositories with environment configuration in minutes.

LEADERSHIP + AWARDS

Certified Cloud Practitioner, *AWS* 2022

Presidents List 2014, 2015
